

CHECK YOUR BATTERY TERMINALS

Loose terminals can cause **MAJOR** problems!

Signs to look for: Not starting or intermittent starting.

The major issue can be the melting of your battery post.

TIP:

Periodically check the condition of your battery cables by inspecting and cleaning them; make sure they have a good connection at the battery post and ground. Routine checks and maintenance will extend the life of your battery.

Here at Harley-Davidson of Frederick & Williamsport, we perform this service for you at all service intervals.

'Til next time, Keep it Rollin'!

A tip brought to you by your service manager at Harley-Davidson of Frederick, Ron.
